## Test Descriptions

### Vertical Jump-

#### Total Power

To measure vertical power production of the full body using a countermovement jump WITH the use of arm action. The results are listed in inches(in).

- **Flight time** (FT; ms): is the time that the athlete is not in contact with the mat for a given jump
- **Height** (Ht; cm or inches): The height achieved by an athlete in a particular jump. The measurements will be in either inches or cms (depending upon the chose measurement option in the [Options] tab in the start screen).
- **Impulse** (Nm): is the net upward impulse of each athlete or the net upward momentum (derived from the take-off velocity) – NOTE – correct athlete mass must be entered for this variable to be calculated accurately)
- **Peak Power Output** (PPO; Watts): Is the peak power output of the jump, calculated using the equations of Sayers (Sayers, S.P., Harackiewicz, D.V., Harman, E.A., Frykman, P.N., and Rosentein, M.T.( 1999) Cross-validation of three jump power equations.

**Linear Sprint**

To measure the acceleration of athletes sprinting in a straight line. Multiple splits can be measured, but 10, 20, 40 and 60 are the most common in athletic development. The results are listed in seconds(s)

**Pro Agility**

To measure acceleration, deceleration, change of direction, positive body control while performing a 5-10-5 Shuttle. The results are listed in seconds(s)
